

IT & Communications for Small & Medium Enterprises

Case Studies: Scenarios & Solutions

mBox for Small Businesses

- ✓ All-in-One Business-in-a-Box Solution
- ✓ Secure Your Business Critical Data
- ✓ Minimise IT and Telephony Costs

OWNER

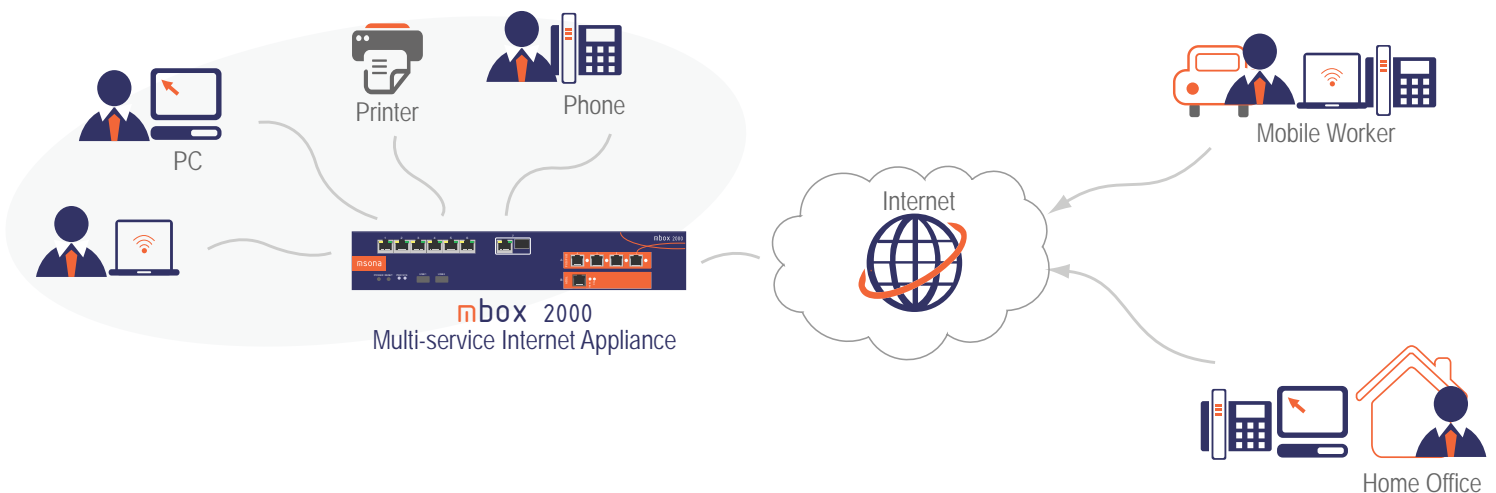

We are a small company with great ambitions to succeed and win. Our IT needs are similar to those of large enterprises but we can only afford limited IT resources. The mBox with its services has satisfied our needs and has taken care of our Internet connection and presence, emails, security, network storage and our telephony system. Today our website and CRM tool run off the mBox which is absolutely fantastic!

STAFF

We are more productive because we can only access the Internet for work. The mBox and its services will not allow us to download music, share photos or access our favourite social websites like Facebook. We can't even access our personal emails from work!

ACCOUNTANT

The company saved a lot of money by installing the mBox and its services. We saved on hardware, software licenses, system integration services and many hours of technical support! Plus the mBox implementation is Green which is great for the environment!

mBox for Multi-Site Small & Medium Enterprise

- ✓ All-in-One Business-in-a-Box Solution
- ✓ Minimise IT and Telephony Costs
- ✓ Secure Your Business Critical Data

OWNER

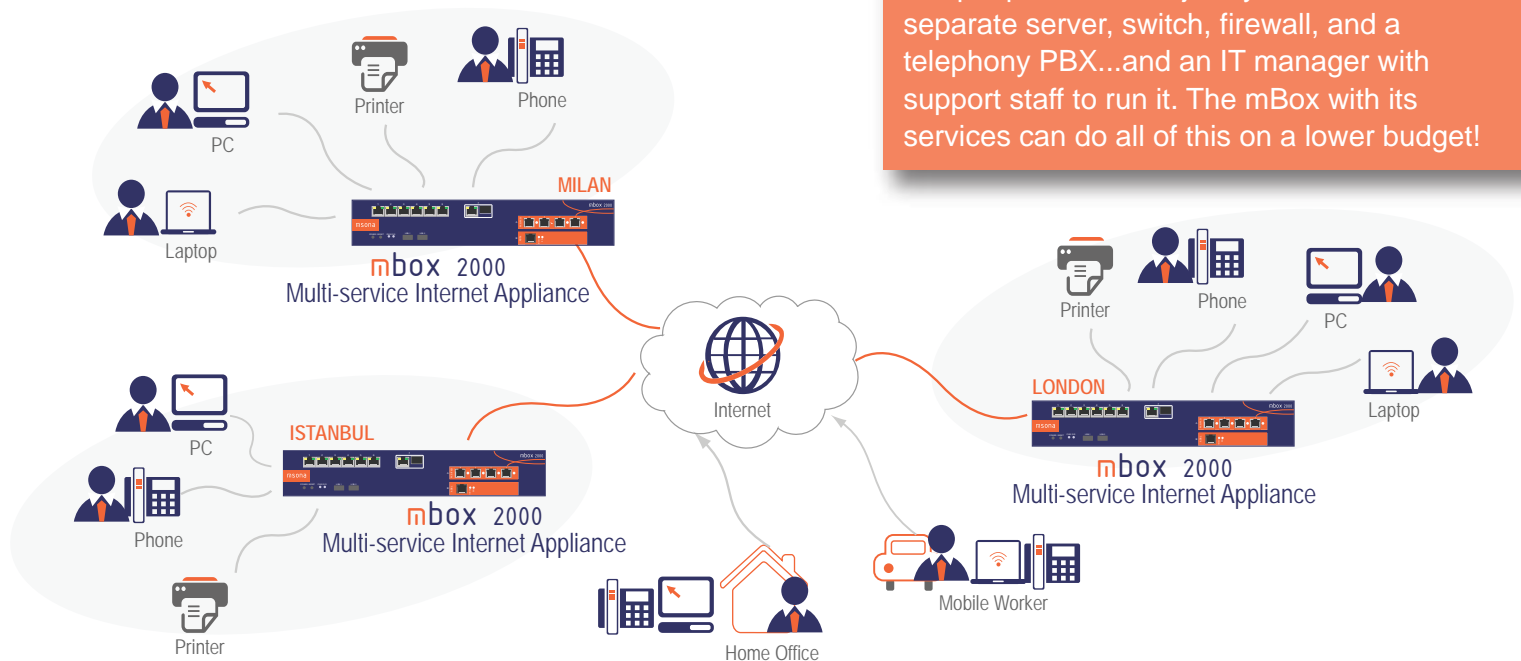

We need Internet connectivity and secure access to shared files and business applications. We are constantly talking on the phone to our colleagues in other branches and need a reliable & cost-effective integrated computing and voice solution.

STAFF

Our branch offices are distributed across many geographic locations. We need a cost-effective & secure wide area network that is simple to setup and can be used by everybody in the company for email, telephony, file sharing and business applications.

ACCOUNTANT

All phone calls between our offices are now free of charge! Some branch offices only have very few people and don't justify the investment in a separate server, switch, firewall, and a telephony PBX...and an IT manager with support staff to run it. The mBox with its services can do all of this on a lower budget!

mBox for Schools

- ✓ All-in-One School-in-a-Box Solution
- ✓ Minimise IT and Telephony Costs
- ✓ Host a Local Virtual Environment (VLE)

TEACHER

The mBox with services takes care of our Internet connection, VLE framework, emails, security and network storage. Also our school's web presence that includes our website and IP telephony system are all implemented on the mBox. It runs our ICT infrastructure for us while we focus on teaching and developing content for our students.

PUPIL

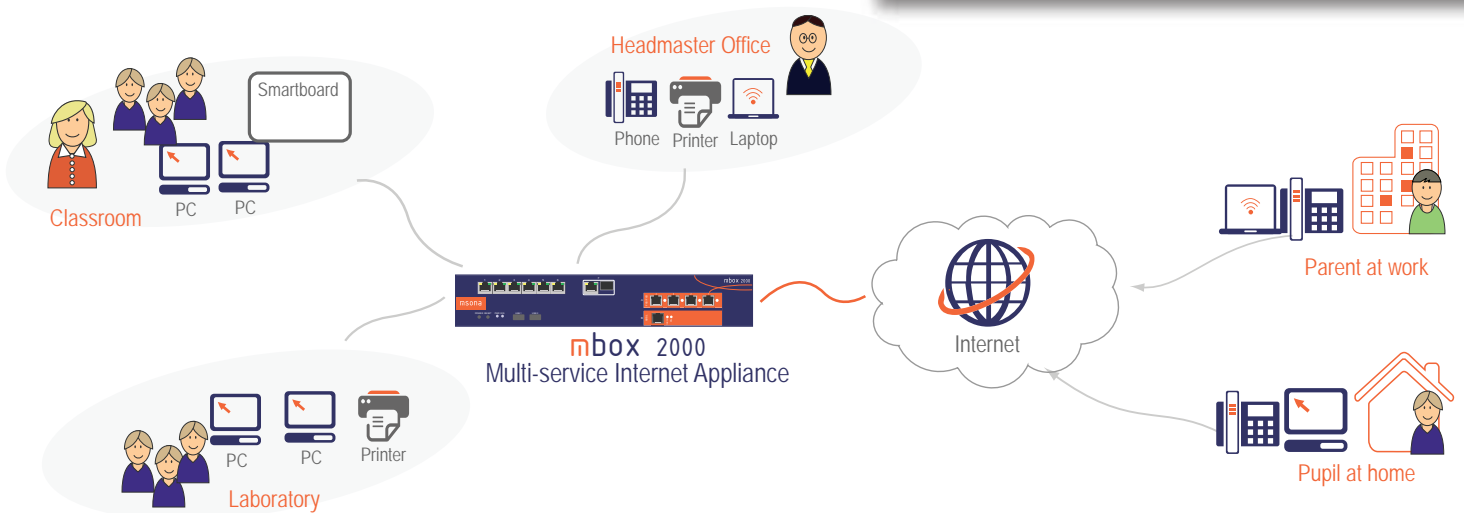

At last, we can browse the Internet safely! No inappropriate content is visible here. We can only access websites and content that are approved by the school. The mBox implementation is Green which is great for the environment!

HEADMASTER

The school has limited budget and IT staff. The mBox reduces our initial investment and provides us with a low-cost solution for running a reliable IT, telephony and e-Learning environment.

PARENT

We can collaborate with teachers, keep up with our children's progress at school, have access to their academic results and better assist them with their learning.

mBox for Travel Agencies

- ✓ All-in-One Business-in-a-Box Solution
- ✓ Minimise IT and Telephony Costs
- ✓ Host Business Applications Locally for high speed response

OWNER

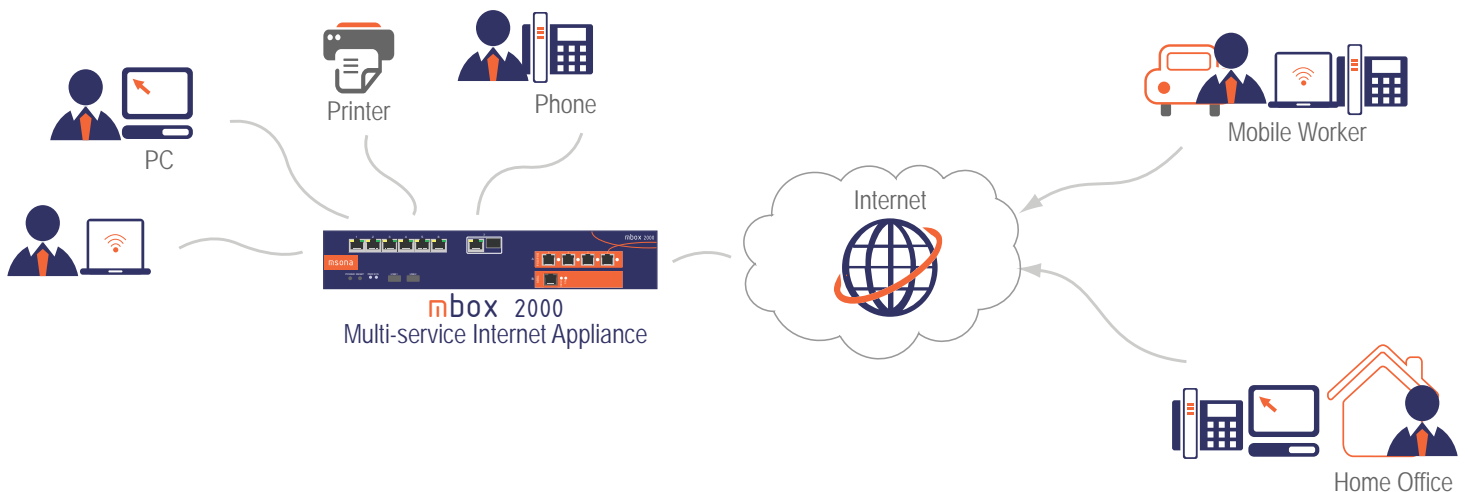

We need a reliable, always-on access to travel & tour booking services, Internet, email as well as low-cost telephony services to reach our customers and suppliers everywhere. Our mBox with its service delivers the technology while we focus on running our own.

STAFF

We can only access the Internet for work to book tickets and holiday packages for our customers. Staff are more productive because they are prevented from downloading music, sharing photos or accessing favourite social websites like Facebook. We can't even access our personal emails from work!

ACCOUNTANT

mBox replaces many separate IT devices saving us money and scarce space in our shops. It keeps our phone bills down and helps us get our business running without the need to keep buying expensive software licenses and support hours!

Our Mission:

“To fulfil the IT and Communications needs of under-served & under-resourced organizations increasing their productivity, efficiency and Quality of Experience (QoE) by providing them with innovative solutions delivered globally through carefully selected channel partners.”

Msona is changing the way ICT applications and services are delivered to Small and Medium Sized customers in the Broadband era. Msona is unlocking the full potential of convergence between communications, networking and IT applications and is innovating the way in which ICT services and applications are created, delivered, managed and supported eliminating the need for the Small & Medium Enterprise user to have any IT expertise. The company offers the first market leading All-in-One multi-service Internet appliance and a portfolio of subscription-based managed ICT services.
